

# 350% more protection right where you need it!

Because your notebook doesn't always travel first class, Targus introduces its **Dome Protection System™**, the first sidewall impact notebook protection technology.

Targus' Dome Protection System™ prevents damage to the most vulnerable area of your notebook - the screen.

The unique patent pending technology built into the Dome Protection System™ was developed by Targus' renowned Product Design Team as a convenient insert sewn within the walls of a notebook case to prevent inadvertent screen damage during travel.

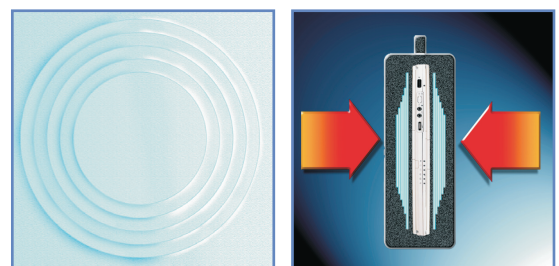

The System works by dispersing side impact forces over the surface of the specially designed and layered insert, thus providing 3.5 times more protection than currently available in unprotected cases.

**Dome Protection System™**  
*Protection in all the right places.*

For more information on how you can protect your notebook computers with the patent pending Dome Protection System™ please contact your Targus Sales Manager, visit [www.targus.com](http://www.targus.com) or call 714-765-5555.

401-0105-001A

The **Dome Protection System™** moves impact pressure away from the vulnerable areas of your notebook and gives greater overall protection against screen damage.
